WHO WE ARE

For over 32 years, **Royal Productions** has been a high-end audio visual company that provides live production services for corporate meetings, conferences, events, galas, among many more. We are also contracted as the dedicated in-house service provider at various hotels & venues throughout the country.

It is our mission to be your full-service production solution partner by creating an impactful and unforgettable experience. We combine education, experience and exceptional service with creativity, attention to detail and competency to create a custom event for you using cutting edge technology including, but not limited to:

-  **Video Projection**
-  **Audio Systems**
-  **Lighting Design**
-  **Custom Stage Production**

Whether you have a small breakout meeting, large general session, corporate annual meeting, live rock concert, or whatever the event may be – we are ready to fully produce stimulating and jaw dropping results. No venue is too big or too small for us. We will transform your dreams & ideas into a high-quality reality production.

HOW WE CAN HELP

At Royal Productions, whether you're planning an event for 30 or 10,000 people – every element of the production is important. Our objective is to create an experience that leaves a long-lasting impression on you and your guests. We will work collaboratively to achieve & execute your goals and allow your content to shine.

- 3D Stage Sets
- LED Wall Stage Sets
- Pixel Mapping Stage Sets
- 3D Rendering
- AutoCAD / Technical Drawings

VIDEO PRODUCTION

Royal provides state of the art cutting edge video projection technology which includes, but not limited to, laser projection along with 4K video projection mapping & Barco E-2 management systems.

LASER PROJECTION

3.7K – 25K Laser Projectors

Exceptional Full HD Widescreen Display

Solid-State Laser Light Source

4K Enhancement Technology

Ready Lenses with Powered
Lens Shift & Memory

Dynamic Projection Capabilities
(includes blending, auto calibration,
& more)

4K VIDEO MAPPING

Projection mapping, also known as video mapping and spatial augmented reality, is a projection technology used to turn objects, often irregularly shaped, into a display surface for video projection. These objects may be complex industrial

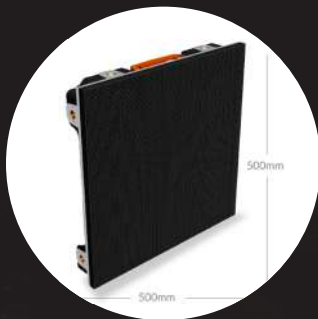

landscapes, such as buildings, small indoor objects or theatrical stages. By using specialized software & projectors, a two-or-three-dimensional object is spatially mapped on the virtual program which mimics the real environment it is to be projected on. The software can interact with a projector to fit any desired image onto the surface of that object. This technique is used by artists and advertisers alike who can add extra dimensions, optical illusions, and notions of movement onto previously static objects. The video is commonly combined with, or triggered by audio to create an audio-visual narrative.

BARCO E-2 MANAGEMENT SYSTEM

Raising the bar for live screen management, the E2 presentation system provides superior image quality, exceptional input and output density, great expandability and durability. Supporting native 4K input and output, it was the first screen management system to manage 4K projector blends with refresh rates up to 60Hz with full 4:4:4 color sampling and 12bit processing. A truly versatile system, it offers eight mixable PGM outputs and four scaled Aux Outputs for full show control with a single box. The E2 can be linked with multiple other E2 chassis to create extremely large pixel processing canvases, to support the largest displays available.

LED PANELS

LED video wall popularity has grown exponentially in recent years because of the seamless delivery of quality video on a platform that is scalable to virtually any size. Royal is leading the charge with the highest quality display solutions on the market. Our LED panels combine flawlessly to offer a variety of resolution options for both indoor and outdoor presentations.

ABCEN C7

Processor: DBStar
Dimensions A7: 500x500

7mm

Easy to install and dismantle while being super slim and lightweight

Noise free

Same cabinet size as the C7, and can be assembled together seamlessly

Capable of being flown or ground supported

UNILUMIN UPAD III

Processor: Novastar
Dimensions: 500x500

2.6mm

Panel supports both concave and convex curve installations

Rear-accessible and magnetic module design

Modular designed power supply and receiving card

High refresh rate up to 3840 Hz produces stunning image performance

Corner option available

AUDIO

Clean, Clear, & Concise. Having the proper audio gear is crucial to your event's success and here at Royal Productions, we only offer top notch equipment. We are experts in designing sound systems for any event/venue. We always take into account venue acoustics, room size, audience setup, and material being presented among other variables.

Our main line-array system is L'Acoustics, but we also offer JBL & Meyer systems along with Mackie, Yamaha, and Presonus digital consoles among others. Other audio services include digital audio recording, conference microphone systems, and translation equipment and services.

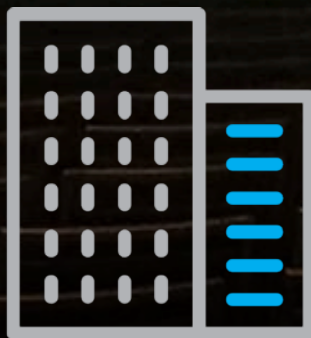

LIGHTING

Innovative and stunning stage lighting is a crucial component for any event. Royal works with the most talented lighting designers to illuminate venues, theater stages, festivals, arena lighting, corporate events, fundraising galas, & more.

Royal boasts an impressive collection of lighting equipment utilizing the latest technology available in conventional lighting fixtures, automated lighting fixtures and LED lighting equipment. A diverse inventory of lighting equipment, professional lighting designers and over 32 years of experience helps us to create the ultimate vision, convey fascinating themes and produce powerful productions.
